

Digital Literacy Project Report

Name: Sweksha Kakkar

Registration No.: 25BCY10159

Branch: CSE (Cyber Security)

Year: 1st Year

Course Code: CSE0001

Date: March 26, 2026

Section 1: Introduction

In this project, I took on the role of a "Digital Ambassador" to explore and promote essential digital literacy skills. The scenario involved building a professional online presence, mastering digital collaboration tools, and understanding cyber safety protocols. This project is designed to bridge the gap between basic internet usage and professional digital competence, covering everything from effective communication to identifying complex cyber threats like phishing.

Section 2: Task 1 Write-up

For the first task, I created a digital literacy awareness infographic using **Canva**. The infographic focuses on three key areas: Digital Tool proficiency, Safe Internet Practices, and Email Etiquette. I chose Canva because of its versatile design elements that allowed me to present data visually.

Reflection: This task taught me that information is much more impactful when presented visually. It helped me realize that as a Cyber Security student, I must be able to simplify technical safety tips for a general audience.

Section 3: Task 2 Write-up

In Task 2, I focused on building a professional online portfolio by setting up and optimizing profiles on **LinkedIn**, **GitHub**, and **Kaggle**. The purpose was to establish a digital footprint that reflects my academic journey and technical skills. **Future Plans:** I plan to regularly update my GitHub with my coding projects and use LinkedIn to network with professionals in the cyber security domain. This task taught me that a professional online presence is just as important as a physical resume in today's tech industry.

Section 4: Task 3 Write-up

This task involved using **HackerRank** for coding practice and **Google Forms** for digital collaboration. I successfully solved the 'Solve Me First' challenge on HackerRank to test my Python basics. Additionally, I built a 5-question 'Digital Literacy Awareness Quiz' on Google Forms to gather data and engage with peers. **What I practised:** I practised logical thinking through code and learned how to structure a survey effectively to collect meaningful responses from a target audience.

Section 5: Task 4 Write-up

Task 4 was about professional communication. I drafted two formal emails: one requesting an assignment extension from a professor and another inquiring about an internship opportunity. I also created a Social Media Do's and Don'ts checklist. **Key Learnings:** I learned the importance of "Subject Lines" and formal salutations. I realized that poor digital communication can lead to missed opportunities, and maintaining a professional tone is non-negotiable in an academic or corporate setting.

Section 6: Task 5 Write-up

Researching cybercrime for Task 5 was eye-opening. I focused on a Phishing case study and developed a prevention guide. **What surprised me:** I was surprised to learn how sophisticated phishing websites have become, often being indistinguishable from official portals. **Habit change:** As a result, I have decided to always check the URL twice before entering my credentials on any site and have enabled Multi-Factor Authentication (MFA) on all my personal accounts.

Section 7: Conclusion

Overall, this project has been a significant learning experience. It moved beyond just theory and allowed me to practically apply digital literacy skills. From designing assets to securing digital identities, I now feel more confident in navigating the online world safely and professionally. As a first-year student, these skills are the foundation of my professional journey in Cyber Security.

Section 8: References

- **Canva:** For Infographic design.
- **HackerRank:** For coding challenges.
- **Google Forms:** For digital surveys.
- **GitHub:** For project hosting and version control.
- **National Cyber Crime Reporting Portal (cybercrime.gov.in):** For safety guidelines.
